Attollo Engineering is looking to hire an experienced electronics and assembly technician. In this position you will be supporting engineering and production staff in assembling electronics and mechanical prototypes and will participate with engineers in “real-time engineering” based on close-coupled test and design modification.

Duties:

- Assembling electrical components onto printed circuit boards
- Soldering surface mount components as small as 0402s, QFNs, TQFP, etc.
- Reading and understanding the assembly related aspects of electrical schematics and associated PCB layouts
- Assembling small parts and components into product assemblies
- Keeping a clean and organized work area and component storage area
- Operating traditional electronics lab equipment including soldering irons and rework tools, oscilloscopes, power supplies, function generators, etc.,

Required skills

- Good dexterity and ability to handle small electronic and mechanical components
- Ability to handle small components and assemblies, sometimes with tweezers
- Self-sufficient and an excellent communicator
- Creative problem solver able to develop solutions to electrical and mechanical challenges
- Understands the needs and differences between engineering and production environments
- Familiarity and experience with 3D printing; both operating FDM printers and using outside services
- Familiarity and experience with machining operations and operating small CNC mills
- Comfortable working in a fast-paced environment

Experience:

- Associates degree or equivalent experience
- 3+ years of experience in a similar environment / role
- Basic experience with Altium Designer and Solidworks is a plus.

Attollo Engineering, LLC is a company specializing in detectors and laser systems for vision applications. The principals have previously worked at companies such as Aeries Photonics, FLIR, W.L. Gore and Associates, Teledyne, and Rockwell Scientific. Attollo offers company stock, standard benefits and competitive compensation.
